

Javascript Program List

1. String Programs

1. Find the length of a string
2. Get character at a given index
3. Search for a substring and check its position
4. Check if a string contains a specific word
5. Extract a portion of a string using slice/substring
6. Convert a string to uppercase and lowercase
7. Remove extra spaces from a string
8. Split a sentence into an array of words
9. Replace a word in a string (single and all occurrences)
10. Repeat a string a given number of times
11. Pad a number with leading zeros
12. Join multiple strings together
13. Check if a string starts/ends with a specific word

2. Array Programs

1. Add and remove elements from the end of an array
2. Add and remove elements from the beginning of an array
3. Double every number in an array using map
4. Filter numbers greater than a given value
5. Find the sum of all array elements using reduce
6. Print each element using forEach
7. Find the first element/index matching a condition
8. Check if an array contains a specific value
9. Sort an array of numbers in ascending order
10. Reverse an array
11. Extract a portion of an array
12. Insert/remove elements at a specific index
13. Merge two arrays
14. Convert an array into a string
15. Flatten a nested array
16. Check whether a variable is an array

3. Object Programs

1. Get all keys of an object
2. Get all values of an object
3. Get key-value pairs as an array
4. Merge two objects into one
5. Freeze an object and try modifying it
6. Check if an object is frozen
7. Convert an array of pairs into an object
8. Check if an object has a specific property
9. Create an object with a custom prototype

4. Map Programs

1. Create a map of countries and their capitals
2. Get a value from a map using its key
3. Check if a key exists in a map
4. Find the total number of entries in a map
5. Loop through all entries of a map
6. Get all keys/values from a map separately
7. Delete an entry from a map

5. Set Programs

1. Create a set and add values to it
2. Check if a value exists in a set
3. Remove a value from a set
4. Find the size of a set
5. Loop through all values in a set
6. Remove duplicate values from an array using a set

6. Date Programs

1. Get the current date and time
2. Extract year, month, and day from a date
3. Find the current day of the week
4. Get the timestamp of the current date
5. Convert a date to ISO format
6. Create a custom date (specific year/month/day)

7. Change the year of an existing date
8. Get the current timestamp using `Date.now()`

7. Number Programs

1. Round a decimal number to 2 places
2. Format a number to a given number of significant digits
3. Convert a number to binary/other base
4. Check if a number is an integer
5. Check if a number is finite
6. Check if a value is NaN
7. Parse a string into a floating-point/integer number
8. Print the maximum safe integer value

8. Math Programs

1. Round a number up/down/nearest
2. Find the absolute value of a negative number
3. Find the maximum/minimum among given numbers
4. Calculate the power of a number
5. Find the square root of a number
6. Generate a random number between 0 and 1
7. Generate a random integer within a range
8. Truncate the decimal part of a number
9. Check the sign of a number
10. Print the value of PI
